March 22, 2019

Dear Parents & Guardians of students at Mother Teresa School,

We are so excited and our students are positively buzzing with excitement to be involved in STREAM – a unique approach to learning that is engaging, diverse, hands-on and inspirational for both our students and staff.

S-Science

T-Technology

R2-Reading & Religion

E-Engineering

A2-Arts (Performing & Visual) & Humanities

M-Math

How does it Work & What are the Benefits for Students? - STREAM is an educational approach using Science, Technology, Reading & Religion, the ARTS & Humanities and Mathematics as an access point for guiding students to be critical thinkers and to be more engaged in how they learn through creativity, problem-solving and collaboration with one another.

This past year Mother Teresa School has been piloting STREAM learning in some classrooms every morning with our students. In those classrooms, we have seen a huge improvement in student engagement and students enjoy being given choices in their approach to learning. Students are starting to make the connection recognizing how their brain works and what makes them inspired to learn.

We are now taking the next steps to fully adopting STREAM learning at Mother Teresa starting in September 2019. Teachers will be trained to facilitate this new learning approach. The Alberta Education curriculum will still be followed but it's in the approach in how it's taught that is different.

We will be hosting an info evening on Monday, April 29, 2019 from 6-8. Come find out all about STREAM learning. Refreshments will be served.

Mother Teresa School will be the first school in Medicine Hat & Southeastern Alberta to offer whole school STREAM learning. Come learn about STREAM and share in our excitement.

Sincerely,

Erika Bodnaruk
Principal
